

# Business School Disrupted: Navigating the AI Transformation

## THE CHALLENGE:

### AI's Erosion of Traditional Value

#### Knowledge Transfer is Commoditized

AI now completes complex business tasks

25% faster with 40% higher quality than human consultants

#### Credential Signaling is Weakening

AI-augmented project portfolios and new employer screening methods are devaluing traditional degrees.

#### Network Value is Shifting

The focus is moving from broad transactional networks to deep, trust-based relationships.

## THE RESPONSE:

### Building Irreplaceable Human Capabilities

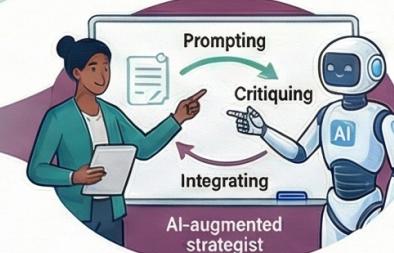

#### Pivot to Judgment: Causal & Ethical Reasoning

Teach students to design new analytical models and navigate complex ethical dilemmas AI cannot solve.

#### Foster Human-AI Collaboration

Train students to act as "AI-augmented strategists" who can prompt, critique, and integrate AI insights.

#### Amplify Real-World Experiential Learning

Shift from simulated case studies to immersive consulting projects and venture building to develop practical wisdom.
